Appendices

Table of Contents

3.A Rational Method Runoff C-Coefficients ........................................ A-1
6.B Representative Base Design Stresses, Normal Load Duration, Visually Graded Dimension Lumber at 19% Moisture, and Plywood Used Wet. ............................. A-3
6.C Effective Section Properties for Plywood (12 in widths)*
   Face Plies of Different Species from Inner Plies............................ A-4
6.D Expressions Used in Calculating the Safe Support Spacings of ACI Chapter 7 Design Tables ................................................................. A-5
