## Appendix

### Table of Contents

2.A Travel Time, Speed, and Delay Study Field Sheet Using the Moving Vehicle Method ... A-1  
2.B Warrant 1, Eight-Hour Vehicular Volume ... A-2  
2.C Warrant 2 ........................................ A-3  
2.D Warrant 3 ........................................ A-4  
2.E Warrant 4 ........................................ A-5  
2.F Warrant 9 ........................................ A-7  
4.C Superelevation, Radius, and Design Speed for Low-Speed Urban Streets* ........... A-23  
4.D Minimum Radii and Superelevation for Low-Speed Urban Streets* A-25  
4.E Minimum Superelevation Runoff for Horizontal Curves ................................. A-29  
4.F Acceleration Distances for Passenger Cars, Level Conditions .......................... A-31  
4.G Deceleration Distances for Passenger Vehicles Approaching Intersections ........ A-32  
4.H AASHTO Design Vehicle Dimensions .................................. A-33  
4.L Minimum Turning Path for Single-Unit Truck (SU-12 [SU-40]) Design Vehicle* A-39  
4.O Minimum Turning Path for Double-Trailers Combination (WB-20D [WB-67D]) Design Vehicle .................................................. A-42  
4.Q Minimum Turning Path for Conventional School Bus (S-BUS36 [S-BUS11]) Design Vehicle* A-44  
4.T Edge-of-Traveled-Way for Turns at Intersections ................................. A-49  
4.V Cross Street Widths Occupied by Turning Vehicles* ................................ A-58  
4.X Corner Setbacks with Different Curb Radii and Width of Borders .................. A-61  
5.A AASHTO Soil Classification System ......................................... A-62  
5.B Unified Soil Classification System .................................. A-63  
5.C USDA Soil Triangle ........................................ A-64  
5.E Superpave Mix Design Procedural Outline ..................................... A-67
